

[*An Apparatus And A Method For Determining Hybrid-Electric Vehicle Performance*]

Abstract of Disclosure

A method and apparatus for determining the performance of a hybrid electric vehicle 10. The hybrid electric vehicle 10 includes a performance prediction and display assembly 12 which comprises a controller 16, speed sensors 20, and a display 22. Particularly, controller 16 calculates the maximum sustainable speed of the vehicle 10 and the calculated maximum sustainable speed and the current vehicular speed are continually calculated/determined, communicated to the display portion 22, and displayed upon the display portion 22, as the hybrid electric vehicle 10 is being operated.
